

Managed Datacenter

Computacenter's Managed Datacenter services enable organisations to remove complexity from day-to-day operations and blend sourcing strategies for an optimal balance between cost, performance and risk.

Business challenge

To minimise costs and maximise agility, organisations need to find faster and smarter ways to provision IT services.

At the operational hub of IT service delivery, the datacenter is the appropriate starting point for a transformation that will drive optimisation and automation across the IT infrastructure.

With datacenter operations under pressure from spiralling power costs, space constraints, regulatory requirements and expensive modernisation investments, internal IT resources are increasingly insufficient to meet business demand.

To escape these internal constraints, organisations need to identify and implement new ways to manage their datacenter assets through internal resources, external expertise or an optimal combination of the two.

Computacenter solution

Computacenter's Managed Datacenter encompasses the full range of service delivery options – from tailored IT managed services to hosting services and dedicated and shared utility-based cloud solutions.

Our datacenter services are tailored to meet an organisations specific requirements and include:

Managed Hosting: provides organisations with space in our datacenter facilities, ranging from tier II to IV, with additional services to simplify day-to-day management.

Managed Server and Storage: provides reliable, secure and flexible 24x7 management of an organisation's datacenter infrastructure assets, either on-premise or hosted at one of our facilities.

For organisations wanting to move toward cloud delivery, Computacenter's C³ platform provides a pragmatic approach to the adoption of cloud services. It provides specific guaranteed outcomes on a pay-per-use utility basis. These services can be delivered on or off premise or as a shared solution from one of our UK datacenters. Services include:

C³Infrastructure: provides organisations with a utility-based computing infrastructure based on a standard architecture.

"We needed to reduce IT costs, and Computacenter's understanding of our company and IT infrastructure enabled us to collaboratively develop a service model that would enable us to achieve this, while ensuring our systems remain highly available."

Andy Griffin,
Head of IT Support,
Parity

On our customers' agenda

These services address three core business issues facing organisations today.

Cost Reduction

Growth /
Business Change

Risk Avoidance

Managed Datacenter

Key benefits

Computacenter's Managed Datacenter services combine the expertise, resources and facilities needed to operate scalable and sustainable datacenter infrastructures. We will help your organisation:

Control costs: By taking advantage of shared resources, remote infrastructure managements and best practice processes, you can achieve higher availability and performance at a lower cost. Our Managed Datacenter services are based on flexible pricing models and help move capital expenditure to operational expenditure.

Facilitate change: By optimising IT service delivery and the datacenter infrastructure, your business will be more responsive to organisational change, new legislative requirements and customer demand.

Enhance performance: By offering guaranteed outcomes at a predictable cost, Computacenter will help you deliver consistent IT services to the business.

Mitigate risk: We will minimise the business risks surrounding regulatory compliance, security, scalability and access to skills within the datacenter environment.

Why Computacenter?

Understanding the consumption, cost and business criticality of different systems is key to deciding which datacenter sourcing models represent the best fit for an organisation.

With 25 years of IT know-how, Computacenter blends IT delivery models to achieve an optimal balance between cost, risk and performance based on each organisation's needs. Our Managed Datacenter services are founded on:

Optimal delivery: Not all business services need high – and therefore expensive – levels of availability. We aggregate the different approaches to help organisations respond to peaks in demand and minimise the cost and complexity of ongoing datacenter operations.

Transparency: We underwrite the outcomes of our services, so you can guarantee the availability and security of business critical systems.

Business alignment: We will work with you to transform datacenter systems and services to improve business value. As an end-to-end IT provider, we can also help source, implement and support the key technologies that underpin your datacenter.
