

Lifecycle Management

Minimise cost of ownership throughout the IT lifecycle with Computacenter's shared resources, industrialised processes and best practice approach.

Business challenge

With the ongoing focus on cost reduction, organisations need to ensure maximum return on investment from new technology purchases with minimum effort.

This requires access to dynamic pricing information as well as scalable resources that can be deployed across multiple sites to meet business requests.

At the same time as maximising the IT budget, organisations need to comply with regulations governing the disposal and recycling of unwanted devices and associated data.

Meeting environmental and data protection legislation does not have to be an expensive process. With the right skills and partner, organisations can establish cost-neutral schemes for recycling and redeploying legacy IT hardware that help them meet their sustainability targets.

Computacenter solution

Computacenter enables organisations to take advantage of best practice standards, industrialised processes and shared resources at key stages of the IT asset lifecycle, including:

Benchmarking:

Provides organisations with transparent, objective and comprehensive price comparison information, both on-demand for specific purchases and on a rolling basis.

IMAC:

Drawing on ITIL best practice, we streamline the execution of moves, changes and additions, enabling organisations to respond faster to business demand and free up internal resources for strategic activities.

Recovery, Recycle & Disposal:

Enables organisations to maximise the lifespan and value of redundant IT assets either through redeployment or recycling in accordance with environmental legislation.

"The benchmarking exercise greatly improved our desktop procurement strategy and enabled us to ensure that our investment delivered maximum value to the business."

Robin Gardner,
IT Programme Manager

Lifecycle Management

Key benefits

By simplifying the management of IT assets throughout their lifecycle, Computacenter helps organisations remove cost and complexity from their operations. Our Lifecycle Management services aid:

Cost control:

Computacenter's shared IMAC resources and competitive product benchmarking will help reduce both operational and capital expenditure.

Business agility:

By providing a rapid and reliable response to IMAC needs across multiple sites, Computacenter will help minimise the risk of business disruption and maximise agility.

Sustainability:

Our recovery, disposal and recycling services enable organisations to meet both their own green objectives as well as government legislation at minimal or even zero cost.

Why Computacenter?

With 25 years of practical IT 'know how', we will help maximise the value of IT while minimising total cost of ownership. Computacenter's Lifecycle Management services are based on:

Vendor independence:

Computacenter has direct relationships with more than 1,100 IT vendors and holds in excess of 200 vendor accreditations.

Supply chain efficiency:

We operate a virtual warehouse that provides 24x7 real-time information on the availability of products. We have the capacity to configure up to 3,000 systems a day and boast the UK's largest independent engineering force.

Environmental expertise:

Our subsidiary RDC has more than 12 years' experience of handling redundant IT equipment for some of Europe's largest organisations. It processes in excess of 450,000 items per annum and holds ISO 14001 certification as well as two Queen's Awards.
